The reproduction of this material, in part or whole, is strictly prohibited. For copy information, contact the Educational Services Department, Digital Equipment Corporation, Maynard, Massachusetts 01754.

The information in this document is subject to change without notice. Digital Equipment Corporation assumes no responsibility for any errors that may appear in this document.

This equipment generates and uses radio frequency energy and if not installed and used properly, that is, in strict accordance with the manufacturer's instructions, may cause interference to radio and television reception. It has been type tested and found to comply with the limits for a Class B computing device in accordance with the specifications in Subpart J of part 15 of FCC Rules, which are designed to provide reasonable protection against such interference in a residential installation. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures.

- reorient the receiving antenna
- relocate the computer with respect to the receiver
- move the computer away from the receiver
- plug the computer into a different outlet so that computer and receiver are on different branch circuits.

If necessary, the user should consult the dealer or an experienced radio/television technician for additional suggestions. The user may find the booklet How to Identify and Resolve Radio/TV Interference Problems prepared by the Federal Communications Commission, helpful. This booklet is available from the U.S. Government Printing Office, Washington, DC 20402, Stock No. 004-000-00345-4.

This manual provides the information you need to operate and maintain your VT240 terminal. The manual is organized into six chapters and three appendices as follows.

- Chapter 1, "A Look at the Terminal," introduces you to the VT240 series of terminals. This chapter provides an overview of what the terminals are and what they do, then briefly describes how they work.
- Chapter 2, "Controls, Indicators, and Connectors," describes the terminal controls, indicators, and connectors, and shows their locations.
- Chapter 3, "Operating Procedures," provides information on specific terminal functions and operating procedures.
- Chapter 4, "Terminal Set-Up," describes each set-up screen feature in detail. This chapter shows you how to select those features to define the terminal operating characteristics.
- Chapter 5, "Communication," describes how the VT240 communicates with a host computer and a peripheral device such as a printer.
- Chapter 6, "Problem Solving," describes the self-test used to find terminal hardware problems. This chapter also contains simple troubleshooting information to correct common operating problems.
- Appendix A, "Specifications," provides all VT240 series specifications.
- Appendix B, "Options, Documentation, and Supplies," describes the options, related documentation, and supplies mentioned in this manual and how to order them.
- Appendix C, "Keyboards," shows the various keyboards available for the VT240 series of terminals.

GENERAL

This chapter introduces you to the VT240 series of terminals. The chapter provides an overview of what the VT240 series terminals are and what they do, then briefly describes how they work.

VT240 COMPONENTS

The three main components of the VT240 series terminals are the monitor, the system box, and the keyboard (Figure 1-1). The VT240 and VT241 terminals use the same system box and keyboard; the only difference between the terminals is that the VT240 has a monochrome monitor, while the VT241 has a color monitor. This manual uses the VT240 to describe general applications, since both the VT240 and VT241 operate the same way.

Monitor

The monitor consists of a monochrome or color cathode-ray tube (CRT) and a monitor board. A single cable connects the monitor to the system box.

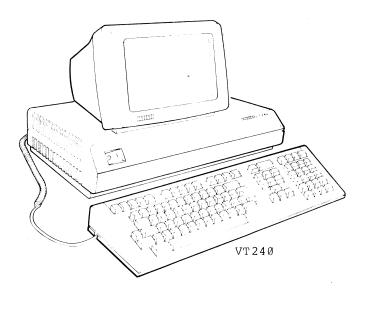

System Box

The system box is the electronic center of the terminal. The main parts of the system box are a power supply, a controller board that contains the central processing unit (CPU), and electrical connectors.

Keyboard

The low-profile keyboard has four groups of keys and four visual indicators. The main keypad operates like a typewriter keyboard. A single coiled cable connects the keyboard to the terminal.

There are 15 basic keyboards available with the VT220. (See Appendix C.) Each keyboard is for a different language.

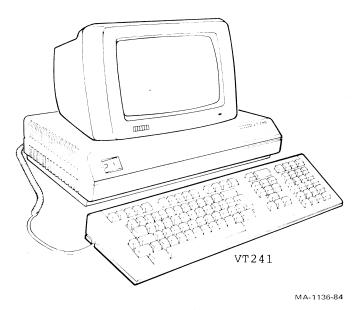

Figure 1-1 VT240 Series Video Terminals

HOW THE VT240 WORKS

The VT240 is a general-purpose video display terminal that lets you interact with a software application program. You can print the images (text and graphics) you create on the VT240 if the terminal is connected to a printer.

The terminal operates by executing standard ANSI functions in text mode, and ReGIS (Remote Graphics Instruction Set) or Tektronix 4010/4014 in graphics mode. You send characters to the host computer by typing on the keyboard. Characters sent from the computer appear on the monitor screen.

OPERATING STATES

The VT240 has three operating states you can select from the keyboard.

- Set-up
- On-line
- Local

Set-Up

The set-up state lets you select or examine terminal operating features. Chapter 4 describes these set-up features in detail. You also use set-up to select the on-line and local states.

You select set-up from the keyboard by pressing the Set-Up key.

On-Line

The on-line state lets the terminal communicate with a host computer. Data entered at the keyboard is sent to the host computer. Data received from the host computer is displayed on the monitor. You can also display data entered from the keyboard on the screen, if you select the local echo feature in set-up (Chapter 4).

You can only select on-line in set-up.

Local

The local state lets you place the host computer on "hold." Data entered at the keyboard is sent to the monitor, but not to the host computer. Data received from the host computer is stored; this data is sent to the monitor after you put the terminal back on-line.

You can only select local in set-up.

OPERATING MODES

The VT240 has five major operating modes. You can select these modes in set-up. The $\underline{\text{default}}$ operating mode is VT200 mode, 7-bit controls. The VT240 operates in the default mode, until you select a new mode.

- VT200 mode, 7-bit controls
- VT200 mode, 8-bit controls
- VT100 mode
- VT52 mode
- 4010/4014 mode

VT200 Mode, 7-Bit Controls

This mode executes standard ANSI functions and lets you use the full range of VT240 capabilities. You should use this mode with application programs that expect 7-bit control characters and either DEC multinational characters or national replacement characters (depending on the character set selected in set-up, Chapter 4).

NOTE

In general, most VT100 application programs will run in VT200 mode, 7-bit controls.

VT200 Mode, 8-Bit Controls

This mode also executes standard ANSI functions and lets you use the full range of VT240 capabilities. You should use this mode with application programs that expect 8-bit control characters and DEC multinational characters.

VT100 Mode

This mode executes standard ANSI functions. You should use this mode with application programs that require strict compatibility with Digital's VT100 terminal.

VT52 Mode

This is a text mode that executes Digital (DEC) private functions (not ANSI). You should use VT52 mode for compatibility with existing application programs designed for Digital's VT52 terminal.

4010/4014 Mode

This is a graphics mode. You should use this mode with application programs designed for Tektronix 4010 and 4014 terminals.

CHARACTER SET MODES

The VT220 has two basic character set modes, multinational and national.

Multinational mode supports the DEC multinational character set (DEC MCS). The DEC MCS is an 8-bit character set that contains most characters used in the major European languages. The ASCII character set is included in the DEC MCS.

National mode supports the national replacement character sets (NRC sets). The NRC sets are a group of eleven 7-bit character sets. You can only use one NRC set at a time. The NRC set available depends on the keyboard selected in set-up (Chapter 4). National mode restricts compatibility to a 7-bit environment, so the DEC MCS is not available.

ReGIS GRAPHICS

You can use ReGIS graphics mode in VT100 or VT200 modes, using commands from the keyboard or from the host computer. You can use graphics mode with application programs designed for Digital's VT125 terminals.

CRT SAVER FEATURE

If during normal operation the terminal is inactive for 30 minutes (no keyboard activity or input from a host computer), the monitor screen goes blank (but data is not lost). Keyboard activity or input from the host computer activates the monitor again. The recommended method for reactivating the screen is to press the Ctrl kev.

PROGRAMMING THE VT240

Your VT240 comes with a VT240 Programmer Pocket Guide. This guide provides a summary of the control codes used to access the terminal's features. For more detailed information, you can order the VT240 Programmer Reference Manual from Digital. (See Appendix B for ordering information.)

NOTE

This manual describes the use of the North American keyboard, unless otherwise specified. When using the North American keyboard, the terminal defaults to multinational mode. (National mode is disabled.)

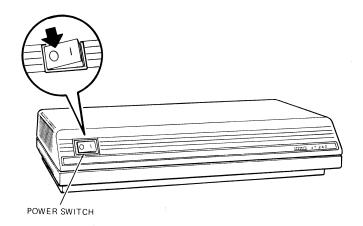

CHAPTER 2 CONTROLS, INDICATORS, AND CONNECTORS

GENERAL

This chapter provides information about the terminal's controls, indicators, and connectors. It also describes the keyboard, including the three keypads and special function keys.

SYSTEM BOX

The system box controls, indicators, and connectors are shown in Figure 2-1 and described in Table 2-1.

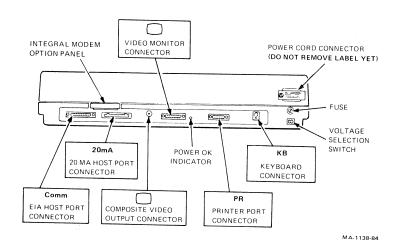

Figure 2-1 System Box Controls, Indicators, and Connectors

Table 2-1 System Box Controls, Indicators and Connectors

Control/Indicator/Connector	Description
Power switch	Turns the terminal on or off. Pressing 1 turns power on. Pressing 0 turns power off.
EIA host port connector	Used to connect the terminal to a host computer, either directly or via a modem.
20 mA host port connector	Used to connect the terminal to a nearby host computer via a $2\emptyset$ mA connection.
Composite video output Connector	Provides a complete video output signal to an additional slave monitor.
Video monitor connector	Used to connect the video monitor cable from the system box to the monitor.
Power OK indicator	Turns on to indicate correct power is applied to the terminal.
Printer port connector	Used to connect a printer or peripheral device to the terminal.
Keyboard connector	Used to connect the keyboard cable to the system box from the keyboard.
	NOTE You can also connect the keyboard cable from the video monitor to the keyboard.
AC input connector	Used to connect the power cord to the system box from the wall outlet.
Fuse	Protects the system from electrical damage.
Voltage select switch	This slide switch lets you match the terminal voltage to the wall outlet voltage. See the VT240 Series Installation Guide for the correct setting.
	CAUTION An incorrect setting can damage the terminal.

MONOCHROME MONITOR

The monochrome monitor controls, indicators, and connectors are shown in Figure 2-2 and described in Table 2-2.

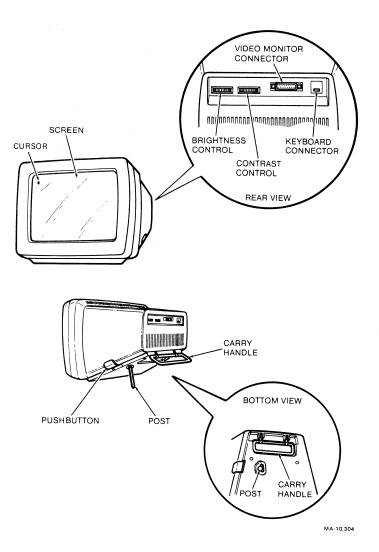

Figure 2-2 Monochrome Monitor Controls, Indicators, and Connectors

Table 2-2 Monochrome Monitor Controls, Indicators, and Connectors

Control	Description
Contrast control	Adjusts the degree of contrast on the monitor screen.
Brightness control	Adjusts the degree of brightness on the monitor screen.
Video monitor connector	Used to connect the video monitor cable to the monitor from the system box.
Keyboard connector	Used to connect the keyboard cable to the monitor from the keyboard.
	NOTE You can also connect the keyboard cable from the system box to the keyboard.
Pushbutton	Adjusts the viewing angle of the monitor. Pressing the pushbutton releases a post that drops to provide a Ø to 3Ø degree tilt range.
Carry handle	Lifts from recess to provide an easy and safe way to carry the video monitor.

COLOR MONITOR

The color monitor controls, indicators, and connectors are shown in Figure 2-3 and described in Table 2-3.

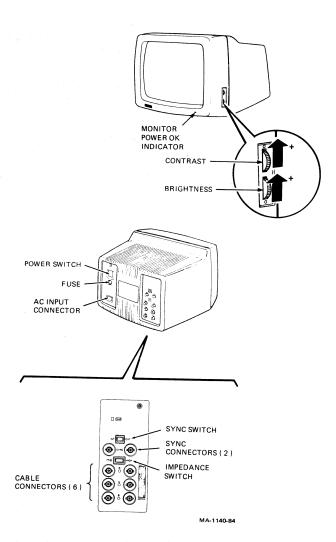

Figure 2-3 Color Monitor Controls, Indicators, and Connectors

Table 2-3 Color Monitor Controls, Indicators, and Connectors

Control	Description
Voltage select switch	This slide switch lets you match the monitor voltage to the wall outlet voltage. See to the VT240 Series Installation Guide for the correct setting.
	CAUTION An incorrect setting can damage the monitor.
Power switch	Turns the monitor on or off. Pressing 1 turns power on. Pressing Ø turns power off.
Fuse	Protects the monitor from electrical damage.
AC input connector	Used to connect the power cord to the monitor from the wall outlet.
Sync switch	Used to select internal or external synchronization.
Sync connectors	Used to connect sync cables.
Impedence switch	Used to select 75 ohm or high impedence.
Video cable connectors	Used to connect the red, green, and blue video cables to the monitor.
Contrast control	Adjusts the degree of contrast on the monitor screen.
Brightness control	Adjusts the degree of bright- ness on the monitor screen.
Power OK indicator	Turns on to indicate correct power is applied to the monitor.

Cursors

The monitor displays one of two cursors, a text cursor (visible in text mode only) or a graphics cursor (visible in graphics mode only).

The text cursor indicates where the next alphanumeric character will appear. You can select the type of text cursor in set-up: an underline cursor, block cursor, or no cursor display.

The graphics cursor indicates the current screen location that the terminal is referencing. This location is the point on the screen most recently moved to or drawn to. You can turn the graphics cursor on or off in set-up.

KEYBOARD

The keyboard (Figure 2-4) consists of the following parts.

- Main keypad
- Editing keypad
- Auxiliary keypad
- Top-row function keys
- Four visual indicators
- Two audible indicators

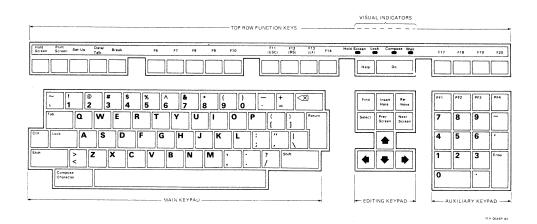

Figure 2-4 Keyboard (North American)

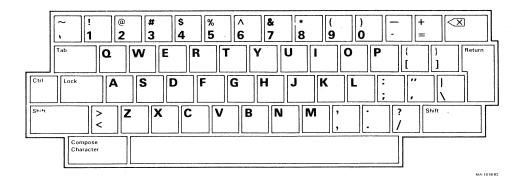

Figure 2-5 Main Keypad

MAIN KEYPAD

This keypad (Figure 2-5) operates like a standard typewriter keyboard.

The main keypad has the following special function keys.

Tab

Pressing the Tab key sends a horizontal tab, which normally moves the cursor to the next tab stop.

Ctrl

Holding down the Ctrl key and pressing another key sends a control code to the system. A control code tells the system to perform a predefined operation.

In this manual, keyboard control functions using Ctrl appear as follows.

Ctrl-(other key)

For example, Ctrl-Z means to press and hold Ctrl while pressing the ${\bf Z}$ key.

Lock

Pressing the Lock key makes the alphabetic keys send uppercase characters. Pressing Lock key again makes the alphabetic keys send lowercase characters. Lock is similar to the Shift Lock key on a typwriter.

Shift

Holding down the Shift key and pressing another key sends uppercase characters, or the top symbol on two-character keys.

In some cases, you use Shift with another key to send a predefined control function. In this manual, keyboard control functions using Shift appear as follows.

Shift-(other key)

For example, Shift-Print Screen means to press and hold Shift while pressing the Print Screen key.

Return

Pressing the Return key sends either a carriage return or a carriage return and line feed (selected in the General Set-Up screen, Chapter 4). In some cases, Return moves the cursor to the next line when editing text. In others, Return is a signal to the system that a particular operation is finished.

X (Delete)

Pressing the X (delete) key sends a DEL (delete) character. Normally, X (delete) erases one character to the left of the cursor. Typing Shift-X (delete) sends a CAN (cancel) character.

Compose Character

This key lets you create characters that do not exist as standard keys on your keyboard. See "Composing Characters" in Chapter 3 to use this key.

EDITING KEYPAD

Normally, you use the editing keypad (Figure 2-6) to control the cursor and edit data that you already entered.

In a typical editing operation, the four arrow keys move the cursor in the direction indicated by the arrow. The six editing keys have functions corresponding to their legends. See your application software manual for specific information.

AUXILIARY KEYPAD

The auxiliary keypad (Figure 2-7) lets you enter numeric data as you would with a standard calculator. Some keys (PF1, PF2, PF3, and PF4) may have functions assigned to them by the application software. See your application software manual for specific information.

The Enter key causes a carriage return or a carriage return and line feed, depending on the General Set-Up screen selection. You can also use Enter in set-up, to activate a selected feature.

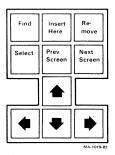

Figure 2-6 Editing Keypad

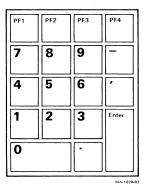

Figure 2-7 Auxiliary Keypad

TOP-ROW FUNCTION KEYS

Most of the top-row function keys (Figure 2-8) have functions assigned to them by the application software. Your application software manual describes the function of these keys. The following paragraphs describe the predefined top-row keys.

Hold Screen

Pressing the Hold Screen key freezes the screen display and stops any new characters from being displayed. The Hold Screen indicator comes on when you press this key. Pressing Hold Screen again returns the terminal to normal operation and turns off the Hold Screen indicator.

Print Screen

Pressing the Print Screen key sends the text on the screen to the printer.

Typing Shift-Print Screen sends the screen image to the printer.

Typing Ctrl-Print Screen sets or resets auto print mode. See "Auto Print Mode" in Chapter 3.

Set-Up

Pressing the Set-Up key causes the terminal to enter or exit the set-up state. (See Chapter 4.)

Data/Talk

The Data/Talk key only operates if the optional integral modem has been installed. (See Chapter 3.)

Break

The Break key is used alone or with other keys to perform an operation.

- Pressing Break alone sends a break if break is enabled in set-up. (See "Keyboard Set-Up Screen" in Chapter 4.)
- Typing Shift-Break starts a disconnect. (See "Connect/Disconnect" in Chapter 5.)
- Typing Ctrl-Break sends the answerback message to the host computer. (See "Keyboard Set-Up Screen" in Chapter 4.)

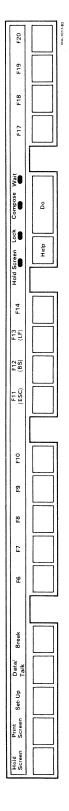

Figure 2-8 Top-Row Function Keys

F11 (ESC)

F11 is normally a function key used by application programs. In VT100 and VT52 modes, it sends an ESC (escape) character.

F12 (BS)

F12 is normally a function key used by application programs. In VT100 and VT52 modes, it sends a BS (backspace) character.

F13 (LF)

F13 is normally a function key used by application programs. In VT100 and VT52 modes, it sends an LF (line feed) character.

Function Key Summary

The following keys are function keys used by application programs. Each key takes on a meaning defined by the particular application program. The meaning of a key may or may not correspond to the legend on the key. The following list shows typical uses for each key. Actual use depends on the application.

In 4010/4014 mode, pressing the Next
Screen key clears the screen.

VISUAL INDICATORS

The keyboard has four visual indicators showing the present status or operation in progress.

Hold Screen Indicator

The Hold Screen indicator is on when the video monitor screen is frozen. See the "Hold Screen" key description.

Lock Indicator

The Lock indicator comes on to indicate that the keyboard will send uppercase characters only. See the "Lock" key description.

Compose Indicator

The Compose indicator comes on to indicate you are performing a compose sequence. (See "Composing Characters" in Chapter 3.)

Wait Indicator

The Wait indicator is on when the keyboard is prevented (locked) from sending information. You can clear this locked condition by invoking the clear comm feature from the Set-Up Directory screen (Chapter 4). See Chapter 5 for the causes of the keyboard locked condition.

AUDIBLE INDICATORS

The keyboard generates two sounds you can select from the Keyboard Set-Up screen (Chapter 4), a keyclick and a bell. You can use the bell as a margin bell, warning bell, or both.

Keyclick

The keyclick sound occurs each time you press a key, with the following exceptions.

- You press Shift or Ctrl. These keys do not generate a keyclick, because they do not generate a character. They modify characters generated by other keys.
- The Wait indicator is on; characters from the keyboard are lost.
- The keyclick set-up feature is off.
- You press an inactive key.

Bell

The bell tone sounds in each of the following cases.

- As part of the power-up self-test
- When the terminal receives a bell (BEL) character from the computer
- When a compose error is made
- When the margin is approached

CHAPTER 3 OPERATING PROCEDURES

GENERAL

This chapter helps you to become familiar with some specific terminal functions and operating procedures. However, your main reference source is the documentation for your application software.

PRINTING

The VT240 has a built-in serial printer interface that supports the following optional Digital printers.

LA34/38 LA35/LA36 LA12

LAIØØ

LA120

LA50

LQPØ2

The VT240 printing functions operate in one of four modes selected from set-up screens (Chapter 4).

Mode Set-Up Screen

Normal Printer Set-Up

Auto print Printer Set-Up

Printer controller Printer Set-Up

Local controller Set-Up Directory and

Printer Set-Up

These modes allow the terminal to perform several print operations selected from the keyboard and/or the computer.

Normal Mode

Normal print mode (default) lets you select all local printing functions from the keyboard.

Auto Print Mode

Auto print mode prints the current display line when the cursor moves to the next line. The cursor moves to the next line when the terminal (1) receives a line feed, form feed, or vertical tab, or (2) automatically wraps the line. When selected, "Auto Print Mode" appears on the status line in set-up. You can use all keyboard printing functions (such as Print Full Page) in auto print mode.

To select auto print mode from the keyboard, type Ctrl-Print Screen. To exit auto print mode, type Ctrl-Print Screen again.

Printer Controller Mode

In printer controller mode, the host computer has direct control of the printer. Characters received from the host computer go directly to the printer, and are not displayed on the screen. (See "Printer Port Operating Modes" in Chapter 5). When selected, "Printer Controller Mode" appears on the status line in set-up. You cannot select this mode from the keyboard (except by entering set-up).

You cannot use local printing functions in printer controller mode. For example, Print Full Page does not work.

Local Controller Mode

Local controller mode is a special mode that lets you send information directly from the keyboard to the printer. This may be useful in setting up certain printers for operation, without involving the host computer.

To select local controller mode, you must select two different set-up features.

- 1. Local selected in the Set-Up Directory screen.
- Printer controller mode selected in the Printer Set-Up screen.

When you select these two set-up features, the terminal is in local controller mode.

INTEGRAL MODEM/AUTO DIALER OPTION

The integral modem/auto dialer option lets you use a telephone for voice communication and the terminal for data normal communication, on the same communications line. This option also lets you use the keyboard to dial telephone numbers to a host computer, instead of using the telephone.

The modem and telephone status are indicated in the status line in set-up (Chapter 4).

NOTE

The integral modem/auto dialer functions are available only if the option is installed.

The integral modem/auto dialer has three operating modes.

Data mode Talk mode Dialer mode

Data Mode

Data mode (default) lets the terminal send and receive data from the host computer. You cannot use the telephone for voice communication in this mode.

To enter data mode, press the Data/Talk key.

Talk Mode

use the telephone for normal voice mode lets you Talk talk mode automatically stops data communication. Entering communication with the host computer.

To enter talk mode, type Ctrl-Data/Talk.

Dialer Mode

Dialer mode lets you perform the following actions.

- Use the keyboard to dial telephone a number. 1.
- 2. Use a single keystroke to redial the last telephone number dialed.
- Recall and dial telephone numbers you have stored. 3.

To enter dialer mode, type Shift-Data/Talk.

USING DIALER MODE FEATURES

The following sections explain how to use dialer mode features, such as dialing and redialing telephone numbers, and dialing stored telephone numbers.

Typing a Telephone Number at the Keyboard

You use the numeric characters Ø through 9 (on the main keypad or numeric keypad) as the conventional telephone number digits. You use the following characters to perform the functions described.

Character	Description
(=)	The equal sign acts as a pause character.
(-, space)	These characters act as separators.

Telephone numbers are limited to 24 characters, including the pause and separator characters. You cannot use alphabetic characters.

You can use the (X) (delete) key to correct errors when entering telephone numbers.

Dialing a New Telephone Number

You can dial a new telephone number at any time (without entering set-up) as follows.

 Type Shift-Data/Talk to enter dialer mode. The monitor displays the following message.

[Entering Dialer Mode]
Enter Number:

Enter the telephone number you want to dial and press the Return key.

The terminal dials the number while displaying the following message.

Dialing (number)
Waiting for connection

The terminal remembers this number until you dial another.

Redialing the Last Telephone Number Dialed

You can redial the last telephone number you dialed at any time (without entering set-up) as follows.

Type Shift-Data/Talk to enter dialer mode. The monitor 1. displays the following message.

[Entering Dialer Mode] Enter Number:

Press the Return key to dial the number. (You do not have 2. to type the number again.)

The terminal dials the last number you dialed, while displaying the following message.

> Dialing (number) Waiting For Connection

The terminal remembers this number until you dial another.

Call Status

If the telephone number you dial is answered within 30 seconds, the monitor displays the following message.

> Connection Established [Exiting Dialer Mode]

The terminal enters on-line mode, allowing the monitor to display the host system response messages.

the telephone number you dial is not answered within 30 seconds, the monitor displays the following message.

> Connection not Established [Exiting Dialer Mode]

The terminal then stops the call.

Storing Telephone Numbers

You can store up to two telephone numbers in set-up. You can then dial these stored numbers (designated A and B) in dialer mode by pressing the A or B key followed by Return. The terminal automatically dials the telephone numbers.

> NOTE For information on using set-up features, see Chapter 4.

Use the following procedure to store telephone numbers.

- Press the Set-Up key and select "Telephone Set-Up."
- Select the "Telephone Number A=" or "Telephone Number B=" field. The set-up status line displays the message "Enter Telephone Number."
- Type the telephone number you want to store. The monitor displays the number in the "Telephone Number" field.
- 4. Press the Enter key to store the telephone number. The terminal stores the number until you change it.
- 5. Press Set-Up to exit set-up.

Dialing Stored Telephone Numbers

Use the following procedure to dial telephone numbers you stored in set-up.

 Type Shift-Data/Talk to enter dialer mode. The monitor displays the following message

[Entering Dialer Mode] Enter number:

 Press the A or B key for the telephone number you want dialed. Then press the Return key. The monitor displays the following message.

Dialing (number) Waiting for connection

NOTE

The monitor screen does not display characters if you chose to conceal the number. (See "Telephone Set-Up Screen" in Chapter 4 for information on the concealed feature.)

Disconnecting Calls

To disconnect a call at any time, use the following method.

 Type Shift-Break. This starts a disconnect. The monitor displays the following message.

[Disconnected]

Monitor Display Messages

Table 3-1 describes the messages the monitor may display when you use dialer mode.

Table 3-1 Dialer Mode Display Messages

Message	Meaning
[Entering Dialer Mode] Enter number:	Tells you that the telephone is effectively off-the-hook, and the terminal is ready to dial a number. Enter the number you want dialed.
Dialing (number) Waiting For Connection	Tells you that there is a dial tone, and a number is being dialed.
Dialing No Dial Tone Detected Press Shift-Data/Talk to restart. Press Enter to continue dialing.	Tells you that no dial tone has been detected. This means your dial tone was not detected by the circuitry, or no dial tone was present.
	If your dial tone is present, but not detectable, press Enter to continue dialing.
Connection Established [Exiting Dialer Mode]	Tells you that the call has been answered.
Connection Not Established [Exiting Dialer Mode]	Tells you that the call was not answered within 30 seconds and has been aborted.
[Disconnected]	Tells you that the call has been disconnected.

COMPOSING CHARACTERS

You can use compose sequences to create characters that do not exist as standard keys on your keyboard. To use a compose sequence, you press a series of keys. There are two types of compose sequences: three-stroke sequences and two-stroke sequences.

> The compose sequences you can use depend on the character set mode selected (multinational or national). Table 3-2 lists the valid compose sequences for multinational mode. Table 3-3 lists the valid compose sequences for each keyboard in national mode. The compose sequences you can use in national mode depend on the keyboard selected.

You can use three-stroke sequences on all VT240 keyboards. First you press the Compose Character key, then you press two keys whose characters form a valid compose sequence.

You can use two-stroke sequences on all keyboards except the North American keyboard. Two-stroke sequences are faster than three-stroke sequences, but are limited to sequences starting with the following nonspacing diacritical marks: grave accent, acute accent, circumflex accent, tilde mark, diaeresis (umlaut) mark, and ring mark. Two-stroke sequences do not use the Compose Character key. Instead, you enter a diacritical mark first. You enter a standard character that forms a valid compose sequence with the diacritical mark.

Diacritical marks are available on all but the North American diacritical marks vary among the keyboards, keyboard. The depending on relative usage. Also, some keyboards have keys that contain both a standard character and a diacritical mark.

As with standard keys, you select the character you want with the Shift and Lock keys.

you use a diacritical mark within a three-stroke sequence, the diacritical mark is treated as its equivalent character.

Diacritical Mark

Diaresis (umlaut) mark Acute accent Grave accent Circumflex accent Tilde mark Ring mark

Equivalent Character

Double quote " Apostrophe Single quote ` Circumflex character ^ Tilde character ~ Asterisk * or degree O Tables 3-2 and 3-3 list all valid compose sequences for multinational and national mode, respectively. Depending on the keyboard, you can create the characters listed in column 1 in one or more ways.

- With a standard key (if available on that keyboard)
- with a three-stroke compose sequence (always)
- With a two-stroke compose sequence (if the diacritical mark is available on the keyboard)

Using a Three-Stroke Compose Sequence

Create a three-stroke compose sequence as follows.

- Locate the character you want to create in column 1 of Table 3-2 or 3-3.
- Press the Compose Character key. (The Compose indicator comes on, indicating the terminal is in compose mode.)
- Type the two characters in column 2 for the character you want to create.

For example, to create e with acute accent, press Compose Character, and then type e and apostrophe; or press Compose Character, and then type apostrophe and e.

When you complete a valid sequence, the Compose indicator turns off, and the composite character is sent to the application. If you use an invalid sequence, the sequence is aborted and the bell sounds (if the warning bell is enabled in the Keyboard Set-Up screen, Chapter 4).

NOTE

Function keys abort a compose sequence without sounding the bell.

Using a Two-Stroke Compose Sequence

Create a two-stroke compose sequence as follows.

NOTE

You can use two-stroke compose sequences on all keyboards except the North American keyboard.

- Locate the character you want to create in column 1 of Table 3-2 or 3-3. Verify from column 3 that the character can be created.
- Press the key with the diacritical mark shown in column
 (The Compose indicator comes on, indicating the terminal is in compose mode.)
- Type the second character shown in column 3.

For example, to create e with a grave accent on a Danish keyboard, press the key that has the grave accent and then type e.

When you complete a valid sequence, the Compose indicator turns off, and the composite character is sent to the application. If you use an invalid sequence, the sequence is aborted and the bell sounds (if the warning bell is enabled in the Keyboard Set-Up screen, Chapter 4).

NOTE

Function keys abort a compose sequence without sounding the bell.

Aborting or Restarting a Compose Sequence

If you accidently enter compose mode (by pressing the Compose Character key or a diacritical mark key), press the (X) (delete) key to immediately abort the compose sequence and exit compose mode. No character is sent to the application.

If you press Compose Character during a compose sequence, a new three-stroke sequence starts from that point. The previous sequence is aborted with no effect on the application.

GENERAL

This chapter describes the VT240 set-up screens, and how to use them. These screens let you examine or change terminal operating features such as transmit/receive speeds, type of cursor, and so on.

The VT240 stores many of its operating features in an NVR (nonvolatile RAM) memory. NVR memory retains theses features even when power is shut off. The terminal also retains the factory-default settings. You can recall these default settings in set-up.

You can change all available set-up features from the keyboard. Some features can be changed by the host computer as described in the VT240 Programmer Reference Manual. (See Appendix B to order other documents.)

USING SET-UP

The set-up state is based on selectable displays called set-up screens. You can select any set-up screen from the Set-Up Directory screen displayed when you enter set-up (Figure 4-1). Each set-up screen displays the features for that set-up function and lets you change or keep those features. You can only display one set-up screen at a time. You can enter the Set-Up Directory screen from any other set-up screen.

Set-Up Screens

Each set-up screen occupies the bottom third of the monitor screen. (Current data scrolls up so the set-up screen can appear.) Incoming data is not lost if the host supports XOFF and that feature is enabled. (See "Communications Set-Up Screen.") Each screen contains the following information (Figure 4-2).

Screen title
Terminal identifier
Firmware version number
Status line
Fields (action, parameter, text parameter)

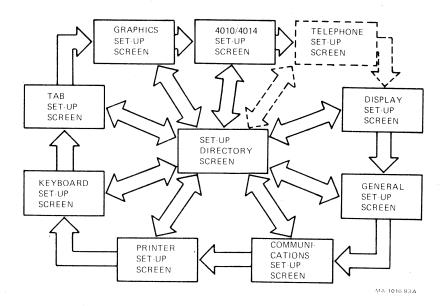

Figure 4-1 Set-Up Screens

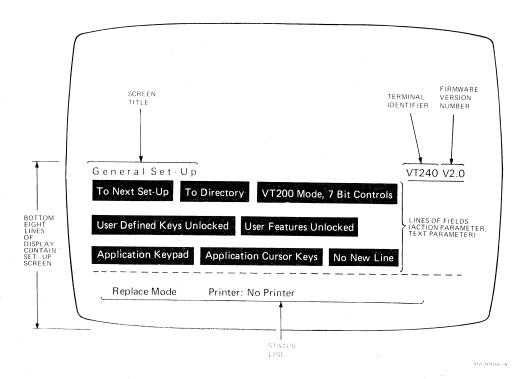

Figure 4-2 Sample Set-Up Screen

Screen Title

The screen title identifies the current set-up screen. There are 10 set-up screens (nine standard, one optional).

6. Keyboard Set-Up Set-Up Directory 2. Display Set-Up3. General Set-Up 7. Tab Set-Up 8. Graphics Set-Up 4. Communications Set-Up 9. 4010/4014 Set-Up 5. Printer Set-Up 10. Telephone Set-Up (optional)

Terminal Identifier

The terminal identifier identifies the type of terminal you are using, in this case a VT240.

Firmware Version Number

The firmware version number identifies the level of firmware the terminal is using.

Status Line

The status line appears at the bottom of each set-up screen. This line shows you the current status of the modem controls (if "EIA Port, Modem Control" or "Intergral Modem" are selected), the telephone (if the integral modem option is selected), the printer, and the terminal insert/replace mode. The status line is a reporting line only; you cannot change the status line from the keyboard. Table 4-1 describes the status line messages.

Table 4-1 Status Line Messages

Report	Values	Meaning
Insert/ Replace:	Insert	The terminal is in insert mode. During normal text operation, all new display characters move old characters to the right; old characters moved past the right margin are lost.
	Replace	The terminal is in replace mode. During normal text operation, all new display characters replace old characters at the cursor position. Replace is the normal mode of operation.

Table 4-1 Status Line Messages (Cont)

Report	Values	Meaning
Printer:	Ready	The printer is ready.
	Not Ready	The printer is not ready.
	None	No printer is available.
	Auto	The terminal is in auto print mode and is ready.
	Controller	The terminal is in printer controller mode and is ready.
Modem:	DSR	The modem is ready to send or receive.
	NO DSR	The modem is not ready to send or receive.
elephone:	Data	The integral modem is in data mode, but no connection has been
		established.
	Dial	The integral modem is in dialer mode.
	Connect	The integral modem is in data mode with a connection established.
<u>agt for</u> do the con-	Talk	The integral modem is in talk mode.

Fields

The fields on each screen are blocks of text describing current operating characteristics. There are three types of fields.

1. Action Field

An action field has only one value. When you select an action field and press the **Enter** key, the terminal performs the action.

For example, each screen has an action field that reads "To Directory." When you select this field and press Enter, the Set-Up Directory screen replaces the current screen.

2. Parameter Field

A parameter field contains a feature with two or more values. When you select a parameter field and press Enter, the next value replaces the current value.

For example, if you select the keyclick parameter field, it may have a value of "Keyclick." Pressing Enter changes the field to "No Keyclick."

Text Parameter Field

A text parameter fields lets you enter a value from the keyboard. You can select a text parameter field as follows.

- Use the arrow keys to move the field cursor to the text parameter field. (See "Set-Up Controls and Cursor.")
- 2. Press Enter. The terminal prompts you for text entry on the "status line" at the bottom of the screen, temporarily overwriting the status line field.
- Type the text or number you want entered as the new value. The value appears next to the prompt.
- 4. Press Enter to enter the new value.

If you make a mistake, press the (X) (delete) key to erase the last character entered. If you want to cancel the entry without changing the original value, press an arrow key to change the field selection. (See "Set-Up Controls and Cursor.")

Set-Up Controls and Cursor

The $VT24\emptyset$ uses a field cursor while in set-up. The field cursor appears as a highlighted field (reverse video) that you can move from field to field with the arrow keys.

Table 4-2 describes the keys used to enter and exit set-up, move the field cursor, and change operating characteristics.

Table 4-2 Set-Up Controls and Cursor Functions

Control Key	Function	
Set-Up	Pressing the Set-Up key one time places the terminal in set-up. Pressing Set-Up again returns the terminal to the operating state (on-line or local).	
Arrow keys	Pressing the arrow keys moves the field cursor in the direction of the arrow.	
Enter	The Enter key lets you perform the function displayed at the field cursor position.	
	If the cursor is on an action field, pressing Enter immediately performs the action.	
	If the cursor is on a parameter field, pressing Enter changes the value of the field. You can use the Enter key to see the range of available field values. The value displayed is the current value invoked.	

SET-UP EXAMPLE: CHANGING FEATURES

This section provides an example of changing the terminal operating characteristics in set-up.

Suppose the terminal is currently set to display its text in 80 columns, and the keyboard keys click each time you press them.

You decide to change these two operating characteristics so the terminal displays 132 columns, and the keys do not click when pressed.

Use the following procedure to change these two operating characteristics in set-up. $\,$

- Press the Set-Up key. The terminal enters set-up and displays the Set-Up Directory screen (Figure 4-3).
- Note that the field cursor is already on the "Display" field.
- Press the Enter key. The terminal replaces the Set-Up Directory screen with the Display Set-Up screen (Figure 4-4).

- Use the arrow keys to move the field cursor on the field 4. that reads "80 columns."
- Press Enter. The field changes from "80 columns" to "132 5. columns," indicating that the feature changed.

Although many parameter changes are immediate (such as the column feature), some changes do not take effect until you exit set-up.

- Use the arrow keys to move the field cursor to the 6. "Directory" field. (You want to change another feature).
- Press Enter. The terminal replaces the Display Set-Up 7. screen with the Set-Up Directory screen.
- 8. Use the arrow keys to move the field cursor to the field that reads "Keyboard."
- Press Enter. The terminal replaces the Set-Up Directory 9. screen with the Keyboard Set-Up screen (Figure 4-8).
- Use the arrow keys to move the field cursor to the field lØ. that reads "Keyclick."
- Press Enter. The field changes from "Keyclick" to "No 11. Keyclick," indicating that the feature changed.
- Press Set-Up to exit set-up and return to the operating 12. mode (on-line or local).

SET-UP SCREEN DESCRIPTIONS

The following sections describe the set-up screens and their features. When you select the various set-up features you want to use, make sure to check off the box beside the parameter value selected for that feature. This gives you a record of the values selected, in case the settings are accidently changed or lost. If repairs to the terminal are necessary, the technician needs this information to reset the set-up feature values.

Table 4-3 summarizes the set-up screens. It lists the features available on each screen.

Table 4-3 Set-Up Screen Summary

Set-Up Directory

Display Set-Up General Set-Up Communications Set-Up Printer Set-Up Keyboard Set-Up _ Tab Set-Up Graphics Set-Up Phone Set-Up On-Line/Local Clear Display Clear Communications Reset Terminal Recall Saved Parameters Save Parameters Set-Up Language Keyboard Language Factory Defaults Exit Set-Up

SET-UP DIRECTORY SCREEN

The Set-Up Directory screen (Figure 4-3) appears immediately when you enter set-up. This screen lets you access any other set-up screen. It also contains fields you can use to select terminal operating features.

Table 4-4 describes all fields on this screen.

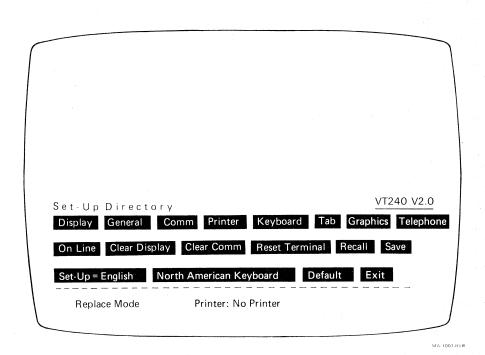

Figure 4-3 Set-Up Directory

Table 4-4 Set-Up Directory Screen

Field	Function
Display	Replaces the Set-Up Directory screen
Action field	with the Display Set-Up screen.
Value: Display	
General	Replaces the Set-Up Directory screen
Action field	with the General Set-Up screen.
Value: General	
Comm	Replaces the Set-Up Directory screen
Action field	with the Communications Set-Up screen.
Value: Comm	
Printer	Replaces the Set-Up Directory screen
Action field	with the Printer Set-Up screen.
Value: Printer	
Property and the second	
Keyboard	Replaces the Set-Up Directory screen with the Keyboard Set-Up screen.
Action field	The second secon
Value: Keyboard	
T ab	Replaces the Set-Up Directory screen
Action field	with the Tab Set-Up screen.
Value: Tab	
Graphics	Replaces the Set-Up Directory screen
Action field	with the Graphics Set-Up screen.
Value: Graphics	

Table 4-4 Set-Up Directory Screen (Cont)

Field	Function		
Telephone Action field	Replaces the Set-Up Directory screen with the Telephone Set-Up screen. This field is present only when the integral modem option is installed.		
Value: Telephone			
On-Line or Local	Lets you select the mode of operation.		
Parameter field			
Values: □ On-Line (default)	Lets the terminal communicate with the host computer.		
□ Local	Effectively puts the host computer on hold. Data entered at the keyboard is sent directly to the monitor screen only.		
Clear Display Action field	Clears the monitor screen when you exit set-up.		
Value: Clear Display			
Clear Comm	Clears communication lines as follows.		
Action field	 Aborts any print operation in progress. 		
Value: Clear Comm	NOTE The printer may not stop printing immediately if it has a large buffer.		
	 Aborts any escape sequence, control sequence or device control string (DCS) processing, including ReGIS. 		
	• Clears the keyboard buffers.		
	• Clears the receive buffer.		
	• Clears the transmit buffer.		

Table 4-4 Set-Up Directory Screen (Cont)

Field	Function		
	 Takes the terminal out of printer controller mode. 		
	 Sends XON to the host port. 		
	 Resets XOFF received flags on the printer and host parts. 		
Reset Terminal	Resets many terminal operating		
Action field	features to a default state. Exits ReGIS.		
Value: Reset Terminal	Does not affect communication, national and multinational modes, and user-defined keys.		
Recall	Replaces all existing set-up features with saved values. The monitor screen is cleared.		
Action field			
Value: Recall	NOTE Recall causes a disconnect to occur.		
Save	Saves most set-up features in all		
Action field	set-up screens.		
Value: Save			
Set-Up=	Lets you select the language used to		
Parameter field	display set-up screens. This field takes effect immediately.		
Values:			

Table 4-4 Set-Up Directory Screen (Cont)

Field	This field lets you select correct terminal operation for the national		
Keyboard			
Parameter field	keyboard you are using.		
Values: North American British Flemish Canadian (French) Danish Finnish German Dutch Italian Swiss (French) Swiss (German) Swedish Norwegian French/Belgian Spanish			
Default Action field Value: Default	Replaces all current set-up features with factory-default settings. The monitor screen is cleared, and the cursor returns to the upper-left corner of the screen. NOTE Default causes a disconnect to occur.		
Exit Action field Value: Exit	Exits set-up and returns the terminal to on-line or local.		

DISPLAY SET-UP SCREEN

The Display Set-up screen (Figure 4-4) lets you define monitor display characteristics.

Table 4-5 describes all fields on this screen.

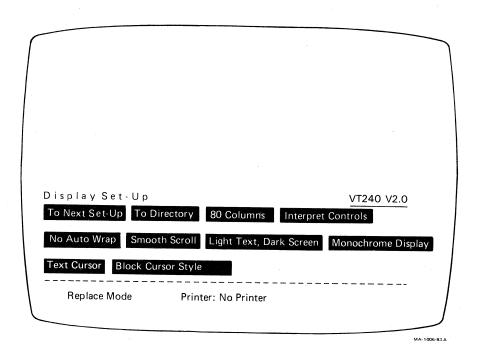

Figure 4-4 Display Set-Up

Table 4-5 Display Set-Up Screen

Field	Function		
To Next Set-Up	Replaces the Display Set-up screen with the General Set-Up screen.		
Action field			
Value: To Next Set-Up			
To Directory	Replaces the Display Set-Up screen		
Action field	with the Set-Up Directory screen.		
Value: To Directory			
Columns	Selects an 80 or 132 column screen		
Parameter field	for text. A change to this field takes effect immediately and clears the display.		
Values: □ 80 Columns (default)	Selects 80-column screen.		
□ 132 Columns	Selects 132-column screen.		
Controls Parameter field	Selects how the terminal handles control codes from the host computer.		
Values:			
☐ Interpret Controls (default)	Interprets control codes, but does not display them.		
☐ Display Controls	Displays control codes as characters but does not execute them.		
□ Display ReGIS	Displays ReGIS commands as they are executed.		

Table 4-5 Display Set-Up Screen (Cont)

Field	Function		
Auto Wrap	Selects whether or not display text automatically wraps on the screen.		
Parameter field			
Values: ☐ Auto Wrap (default)	Causes a character received after the right margin to automatically appear in the first character position of the next line.		
□ No Auto Wrap	Causes characters received after the right margin to be overwritten into the last character position of the current line.		
Scroll	Selects how fast lines appear on the		
Parameter field	screen.		
Values:			
□ Smooth Scroll (default)	Limits the speed at which new lines appear on the screen, causing a smooth steady scroll		
☐ Jump Scroll	Displays new lines as fast as they are received, causing a jump scroll.		
□ No Scroll	Disables scrolling.		
	NOTE This field is ignored if the terminal is in 4010 mode.		
Text, Screen	Selects the screen display type.		
Parameter field	1-17-27-01		
Values:			
□ Light Text, Dark Screen (default)	Selects a normal screen display (light text on a dark background).		
□ Dark Text, Light Screen	Selects reverse video screen display (dark text on a light background).		

Table	4-5	Display	Set-Up	Screen	(Cont)
-------	-----	---------	--------	--------	--------

Field	Function
Display Parameter field	Selects the color map to operate with a monochrome or color monitor (or both).
Values: ☐ Monochrome Display (default)	Select this setting when you use a monochrome monitor.
□ Color Display	Select this setting when you use a color monitor.
□ Mono+Color	Select this setting when you use both a monochrome and a color monitor.
Text Cursor Parameter field	Selects whether or not the text cursor is displayed in text mode.
Values: ☐ Text Cursor (default)	Displays the cursor.
□ No Text Cursor	Does not display the cursor.
Cursor Style Parameter field	Selects the text cursor style displayed.
Values: □ Block Cursor (default)	Displays block cursor.
☐ Underline Cursor	Displays underline cursor.

GENERAL SET-UP SCREEN

The General Set-Up screen (Figure 4-5) lets you define a group of commonly used general operating features.

Table 4-6 describes all fields on this screen.

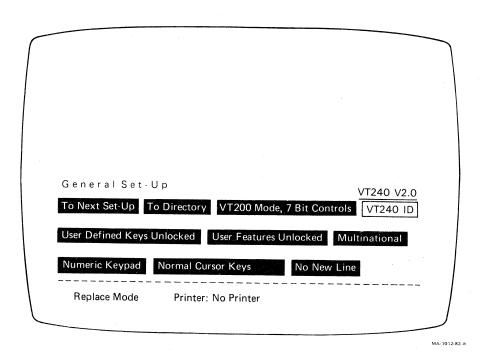

Figure 4-5 General Set-Up

Table 4-6 General Set-Up Screen

Field	Function
To Next Set-Up Action field	Replaces the General Set-Up screen with the Communications Set-Up screen.
Value: To Next Set-Up	
To Directory Action field Value: To Directory	Replaces the General Set-Up screen with the Set-Up Directory screen.
Mode Parameter field	Selects the basic text operating mode.
Values: □ VT200 Mode, 7-Bit Controls (default)	Sets the terminal to operate with a full range of capabilities, using 8-bit graphic characters and 7-bit controls. This is the recommended mode for most applications, including many VT100 applications.
□ VT200 Mode, 8-Bit Controls	Sets the terminal to operate with a full range of capabilities in an 8-bit environment with 8-bit controls.
□ VT52 Mode	Sets the terminal for use with application programs designed for a VT52 terminal.
□ VT100 Mode	Sets the terminal for use with application programs requiring strict VT100 compatibility.
□ 4010/4014 Mode	Sets the terminal for use with application programs designed for use with Tektronix 4010 and 4014 terminals.

Table 4-6 General Set-Up Screen (Cont)

Field	Function
VT100 Mode Terminal ID Parameter field	Selects the Device Attributes response (terminal ID) in VT100 mode.
rarameter field	NOTE This field is unique. It only appears on the screen in VT100 mode.
Values:	
□ VT24Ø ID (default)	Causes the terminal to send the device attributes of a VT240 terminal to the host computer.
□ VT100 ID	Causes the terminal to send the device attributes of a VT100 terminal to the host computer.
□ VT1Ø1 ID	Causes the terminal to send the device attributes of a VT101 terminal to the host computer.
□ VT102 ID	Causes the terminal to send the device attributes of a VT102 terminal to the host computer.
□ VT125 ID	Causes the terminal to send the device attributes of a VT125 terminal to the host computer.
User Defined Keys	Selects whether or not the host can
Parameter field	change user defined key (UDK) definitions.
Values: User Defined Keys Locked	Prevents new UDKs from being loaded.
<pre>User Defined Keys Unlocked (default)</pre>	Allows new UDKs to be loaded.

Table 4-6 General Set-Up Screen (Cont)

Field	Function	
User Features	Selects whether or not the host can change user preference features you have set.	
Parameter field		
Values: ☐ User Features Unlocked (default)	Lets the host change user features.	
□ User Features Locked	Prevents the host from changing features.	
	The following user preference features are affected by this feature. - Auto Repeat - Smooth/Jump Scroll - Light/Dark Screen - Tab Stops - Keyboard Lock	
	NOTE Some software applications expect to control these user features. If this applies to your particular software, set the value of the field to "User Features Unlocked" to ensure predictable behavior.	
Character Set Mode	Selects either the national or multinational character set mode.	
Parameter field		
	NOTE If you selected the North American keyboard, only multinational mode is available. National mode is disabled.	
Values:		
□ Multinational (default)	Enables the terminal to generate 8-bit multinational characters, including 7-bit ASCII characters.	
□ National	Causes the terminal to use one of eleven 7-bit national replacement character sets. The NRC set depends on the keyboard field selected in the Set-Up Directory screen.	

Table 4-6 General Set-Up Screen (Cont)

Field	Function
Keypad	Selects whother the hour
Parameter field	Selects whether the keypad sends ASCII character codes or control codes.
Values:	
□ Numeric Keypad (default)	Causes the auxiliary keypad to send ASCII character codes corresponding to the numeric characters on the keys.
☐ Application Keypad	Causes the auxiliary keypad to send control codes used by an application program.
Cursor Keys	Colorba
Parameter field	Selects whether the cursor keys sends ANSI cursor control sequences or application control functions.
alues:	
□ Normal Cursor Keys (default)	Cursor keys send ANSI cursor control sequences (up, down, left and right).
□ Application Cursor Keys	Cursor keys send application program control functions.
New Line arameter field	Selects whether the Return key sends a carriage return only, or a carriage return and a line feed.
alues:	
□ No New Line (default)	The Return key sends a carriage return only. Received carriage returns do not cause a new line operation.
□ New Line	The Return key sends a carriage return and a line feed. Received carriage returns cause a new line operation.
•	NOTE When the terminal is in numeric keypad mode, this feature affects the Enter key in the same way it does the Return key.

COMMUNICATIONS SET-UP SCREEN

The Communications Set-Up screen (Figure 4-6) lets you define the communications environment between the terminal and host.

Table 4-7 describes all fields on this screen.

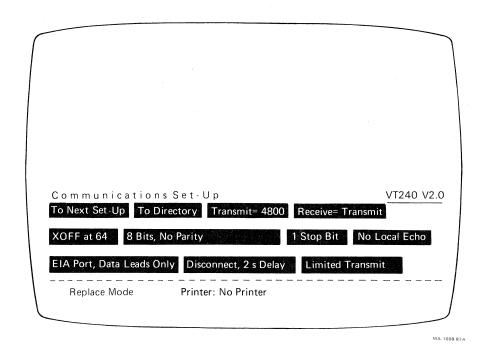

Figure 4-6 Communications Set-Up

Table 4-7 Communications Set-Up Screen

Field	Function
To Next Set-Up	Replaces the Communications Set-Up
Action field	screen with the Printer Set-Up screen.
Value: To Next Set-Up	
To Directory	Replaces the Communications Set-Up
Action field	screen with the Set-Up Directory screen.
Value: To Directory	
Transmit=	Selects the rate at which the
Parameter field	terminal sends data to the host computer.
Values:	
☐ Transmit= 75 ☐ Transmit= 110 ☐ Transmit= 150 ☐ Transmit= 300 ☐ Transmit= 600 ☐ Transmit= 1200	The terminal transmit speed must match the computer receive speed. However, the terminal can transmit at one speed and receive at another
☐ Transmit= 2400 ☐ Transmit= 4800 (default) ☐ Transmit= 9600 ☐ Transmit=19200	
Receive=	Selects the rate at which the
Parameter field	terminal receives data from the hos- computer.
Values:	
☐ Receive= 75 ☐ Receive= 110 ☐ Receive= 150 ☐ Receive= 300 ☐ Receive= 600 ☐ Receive= 1200 ☐ Receive= 2400 ☐ Receive= 4800 ☐ Receive= 9600 ☐ Receive=19200 ☐ Receive=Transmit (default)	The terminal receive speed must match the computer transmit speed. However, the terminal can receive at one speed and transmit at another.

Table 4-7 Communicat	ons Set-Up	Screen	(Cont)
----------------------	------------	--------	--------

Field	Function
XOFFParameter field	Selects the XOFF point or disables the automatic XON/XOFF flow control (See "Terminal/Host Data Flow Control" in Chapter 5.)
Values:	
□ XOFF at 64 (default)	For most applications you should set XOFF at 64 or 256. If you set XOFF greater than 256 and have a buffer
☐ XOFF at 256	overflow problem, set XOFF to the next lower value until the problem
□ XOFF at 512	stops.
\square XOFF at 1024	
□ No XOFF	
Bits, Parity	Selects the character format used for communication with the host
Parameter field	<pre>computer. (See "Character Format" in Chapter 5.)</pre>
Values:	
☐ 8 Bits, No Parity (default) ☐ 8 Bits, Even Parity ☐ 8 Bits, Odd Parity ☐ 7 Bits, No Parity	NOTE This feature does not set the format for the printer port.
☐ 7 Bits, Even Parity ☐ 7 Bits, Odd Parity ☐ 7 Bits, Mark Parity ☐ 7 Bits, Space Parity ☐ 7 Bits, Even Parity,	
No Check □ 7 Bits, Odd Parity, No Check	
□ 8 Bits, Even Parity No Check	
□ 8 Bits, Odd Parity No Check	
Stop Bit	Sets the number of stop bits (1 or 2) used by the host port. (See
Parameter field	"Character Format" in Chapter 5.)
Values:	
□ l Stop Bit (default)	NOTE This field value does not set stop bits for the printer port.
\square 2 Stop Bits	bits for the printer port.

Table 4-7 Communications Set-Up Screen (Cont)

Field	Function
Local Echo	Enables or disables the local echo
Parameter field	feature.
Values:	
□ No Local Echo (default)	Sends data from the keyboard to the host computer only; the host may or may not send the data back to the monitor screen.
□ Local Echo	Sends data from the keyboard to the monitor screen as well as the host computer.
Port	
Parameter field	Selects the type of port used for communication with the host computer. (See "Host and Auxiliary
Values:	Port Interfaces" in Chapter 5.)
□ 20 mA Port	Select the 20 mA port if the terminal connects to the host computer via the 20 mA port.
□ EIA Port, Data Leads Only (default)	Select EIA port, data leads only if the terminal connects directly to the host computer via the COMM port, or indirectly using an external modem.
☐ EIA Port, Modem Control	Select EIA port, modem control if the terminal connects to the host via the COMM port and an external modem requiring modem control is used.
□ Integral Modem Port	Select the integral modem port if the terminal is using the VT24X-AA integral modem option to communicate with the host computer.

Table 4-7 Communications Set-Up Screen (Cont)

Field		Function
Disconnect,	Delay	When modem control is used, the
Parameter fiel	đ	disconnect delay feature determines the time allowed before the terminal disconnects from the communications line when the received line signal detection (RLSD) is lost.
Values:		
□ Discon 2s Del (defau	ay	All countries except the United Kingdom should use the 2s delay.
□ Discon 60ms D	•	The 60ms delay is for use in the United Kingdom.
Transm	it	Selects the terminal transmit speed.
Parameter fiel	đ	
Values:		
	d Transmit lt)	Limits the terminal transmit speed to 150 to 180 characters per second, regardless of the baud rate. This places a minimal interrupt burden on the operating system.
□ Unlimi	ted Transmit	Selects an unlimited terminal transmit speed.

PRINTER SET-UP SCREEN

The Printer Set-Up screen (Figure 4-7) lets you define printer (or auxiliary device) operations with the VT240.

Table 4-8 describes all fields on this screen.

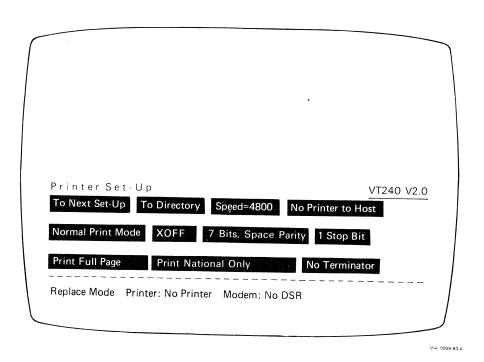

Figure 4-7 Printer Set-Up

Table 4-8	Printer	Set-Up	Screen
-----------	---------	--------	--------

Field	Function
To Next Set-Up	Replaces the Printer Set-Up screen
Action field	with the Keyboard Set-Up screen.
Value: To Next Set-Up	
To Directory	Replaces the Printer Set-Up screen
Action field	with the Set-Up Directory screen.
Value: To Directory	
Speed= Parameter field	Selects the rate at which the terminal sends data to, and receives data from, a printer (or auxiliary
Values: Speed= 75	device).
Parameter field	Selects whether or not input from the printer (or auxiliary device) is sent to the host computer.
Values: [] Printer to Host	Sends data from the printer (or auxiliary device), as well as the terminal keyboard, to the host computer.
□ No Printer to Host (default)	Sends data from the terminal keyboard only to the host computer. The terminal ignores data received from the printer.

Table 4-8 Printer Set-Up Screen (Cont)

Field	Function	
Stop Bits	Sets the number of stop bits (1 or	
Parameter field	2) to match those used by the printer (or auxiliary device).	
Values: □ l Stop Bit (default)	Selects 1 stop bit.	
□ 2 Stop Bits	Selects 2 stop bits.	
PrintParameter field	Selects how much of the screen is printed during a text print operation.	
Values: □ Print Full Page (default)	Print the full screen.	
☐ Print Scroll Region	Print only the scrolling region.	
Printed Data Type	Selects the type of characters (fro the terminal's character sets) to send to the printer.	
Values: ☐ Print National Only (default)	Use with a printer that supports ASCII (multinational mode) or the current national set (national mode). (Examples: LA34, LA36, LA120 non-Digital printers).	
□ Print National and Line Drawing	Use with a printer that supports ASCII, and the line drawing sets (multinational mode), or the curren national set and the line drawing set (national mode). (Example: LA100.)	
□ Print Multinational	Use with a printer that supports the multinational and line drawing sets (Example: LA50.)	

Table 4-8 Printer Set-Up Screen (Cont)

Field	Function
Mode	Selects the operating mode for the printer.
Parameter field	
Values:	
□ Normal Print Mode (default)	Lets you invoke print functions from the keyboard.
□ Auto Print Mode	Prints the current text line when the terminal receives a line feed, form feed, or vertical tab code from the host.
□ Controller Mode	Causes the printer port to treat the device connected to it as a terminal while the VT240 monitors traffic. (The printer and host computer transfer data without displaying the data on the monitor screen.)
XOFF	Lets you enable or disable XON/XOFF
Parameter field	flow control support for the printer port.
Values:	
□ XOFF	Enables XON/XOFF flow control for the printer port.
□ NO XOFF	Disables XON/XOFF flow control for the printer port.
Bits, Parity	Selects the character format used by
Parameter field	the printer port. (See "Character Format" in Chapter 5.)
Values:	
☐ 7 Bits, No Parity ☐ 7 Bits, Mark Parity ☐ 7 Bits, Space Parity (default)	Parity for received characters is always checked if you select even or odd parity.
☐ 7 Bits, Even ☐ 7 Bits, Odd ☐ 8 Bits, No Parity ☐ 8 Bits, Even Parity ☐ 8 Bits, Odd Parity	NOTE Select the correct character format to match the printer. For example, if you use a 7-bit compatible printer, then select one of the five 7-bit parameter field options.

Table 4-8 Printer Set-Up Screen (Cont)

Field	Function
Print Terminator	Selects whether or not a terminator
Parameter field	(form feed) is sent at the end of print page operation.
Values: ☐ Terminator = FF	Selects the form feed (FF) terminator.
□ No Terminator (default)	Selects no terminator.

KEYBOARD SET-UP SCREEN

The Keyboard Set-Up screen (Figure 4-8) lets you define keyboard operating features.

Table 4-9 describes all fields on this screen.

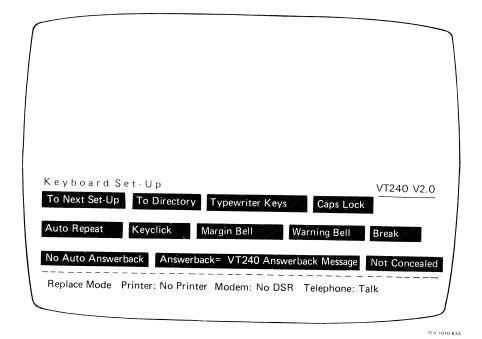

Figure 4-8 Keyboard Set-Up

Table 4-9 Keyboard Set-Up Screen

Field	Function
To Next Set-Up	Replaces the Keyboard Set-Up
Action field	screen with the Tab Set-Up screen.
Value: To Next Set-Up	
To Directory	Replaces the Keyboard Set-Up screen with the Set-Up Directory
Action field	screen.
Value: To Directory	
Keys	Sets the terminal keyboard map for the type of keyboard you are using.
Parameter freid	using.
Values: □ Typewriter Keys (default)	If your keyboard is North American, select "Typewriter Keys."
□ Data Processing Keys	For all other keyboards, select either "Typewriter Keys" or "Data Processing Keys."
	"Typewriter Keys" selects the characters on the left half of the keycaps; "Data Processing Keys" selects the characters on the right half of the keycaps.
	Example The French Canadian keyboard uses a key that has a C cedilla Ç (on the left side) and brackets [(on the right side).]
	Selecting "Typewriter Keys" makes the key respond as uppercase and lowercase $oldsymbol{arphi}$.
	Selecting "Data Processing Keys" makes the key respond as [.

Table 4-9 Keyboard Set-Up Screen (Cont)

Field	Function
Lock Parameter field	Selects the function of the Lock key. Pressing Lock key turns on the Lock indicator on the keyboard. To clear the lock function, simply press Lock again. (The Lock indicator turns off.)
Values:	
□ Caps Lock (default)	The alphabetic keys send uppercase characters only.
□ Shift Lock	The alphabetic keys send uppercase characters, and the numeric/symbol keys send the top characters only. Shift Lock can also be cleared by pressing the Shift key.
Auto Repeat Parameter field	Selects whether or not keystrokes automatically repeat when you hold down a key.
Values:	down a key.
□ Auto Repeat (default)	Pressing a key generates the character repeatedly until the key is released.
□ No Auto Repeat	Pressing a key generates only one character.
Keyclick	Selects whether or not the
Parameter field	keyboard generates a clicking sound each time a key is pressed.
Values: □ Keyclick (default)	Selects the keyclick feature.
□ No Keyclick	Turns off the keyclick feature.

Table 4-9 Keyboard Set-Up Screen (Cont)

Field	Function
Margin Bell	Selects whether or not the terminal generates a bell tone when the text
Parameter field	cursor approaches the right margin.
Values: ☐ Margin Bell (default)	Selects the margin bell feature.
□ No Margin Bell	Turns off the margin bell feature.
Warning Bell Parameter field	Selects whether or not the terminal generates a bell tone for operating errors, and for Ctrl-G.
Values: ☐ Warning Bell (default)	Selects the warning bell feature.
☐ No Warning Bell	Turns off the warning bell feature.
Break	Enables or disables the Break key function (See "Break" in Chapter
Parameter field	3.)
Values: ☐ Break (default)	Selects the Break key function.
□ No Break	Turns off the Break key function.
	Terminal disconnect (Shift-Break) is not affected by this feature. (See "Connect/Disconnect" in Chapter 5.)
Auto Answerback Parameter field	Selects whether or not the answerback message is automatically sent to the host computer after a communication line connection.
Values:	
□ Auto Answerback (default)	Selects the answerback message feature.
□ No Auto Answerback	Turns off the answerback message feature.

Table 4-9 Keyboard Set-Up Screen (Cont)

Field	Function
Answerback=	Allows an answerback message
Text Parameter field	entry.
Value: text entry	The terminal sends an answerback message when it receives ENQ or you type Ctrl-Break. In the case of ENQ, the message you enter is sent to the host without affecting screen data or requiring further operator action.
	When you select this field, the set-up status line displays the prompt "Enter Answerback = " (temporarily overwriting the status line). You can enter any keyboard character, up to a 30-character limit.
	Your message can be concealed using the "Concealed" feature in this set-up screen.
Concealed	Selects whether or not your
Parameter field	answerback message entry is displayed on the screen.
Value:	
□ Concealed	Your answerback message is not displayed on the screen, so it will not be revealed. You cannot reset this feature to "Not Concealed", except by entering a new answerback message.
□ Not Concealed (default)	The terminal can display the answerback message as entered.

TAB SET-UP SCREEN

The Tab Set-Up screen (Figure 4-9) lets you set the terminal tab stop settings.

Table 4-10 describes all fields on this screen.

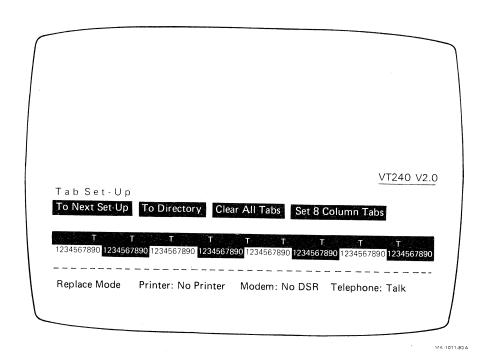

Figure 4-9 Tab Set-Up

Table 4-10 Tab Set-Up Screen

Field	Function
To Next Set-Up	Replaces the Tab Set-Up screen with
Action field	the Graphics Set-Up screen.
Value: To Next Set-Up	
To Directory	Replaces the Tab Set-Up screen with
Action field	the Set-Up Directory screen.
Value: To Directory	
Clear All Tabs	Clears all tabs previously set.
Action field	
Value: Clear All Tabs	
Set 8 Column Tabs	Automatically sets tabs every 8
Action field	columns, starting with column 9.
Value: Set 8 Column Tabs	

The tab stop fields are one character wide. A ruler appears below the tab stop fields on the screen. Refer to the ruler when setting tabs.

There is one tab stop field for each column on the screen display. The screen can be either 80 or 132 columns wide, depending on the number of columns set. (See "Columns" in the Display Set-Up screen.)

There are two possible settings for each tab stop field: the letter ${\tt T}$ (tab stop setting) or a blank (no tab stop set).

You can move the field cursor to a tab stop field with the arrow keys or the Tab key. After you select a field, press the Enter key to place a T in a blank field or erase a T from that field.

GRAPHICS SET-UP SCREEN

The Graphics Set-Up screen (Figure 4-10) lets you define graphics characteristics.

Table 4-11 describes all fields on this screen.

NOTE

To set Tektronix 4010/4014 characteristics, refer to the documentation for the application software.

Graphics Cursor	Selects whether or not to display
Parameter field	the graphics cursor.
Values: □ No Graphics Cursor	Does not display the cursor.
☐ Graphics Cursor (default)	Displays the cursor.
Macrograph Report	Selects whether or not the contents
Parameter field	of a macrograph report is sent in the response to the ReGIS Report Macrograph command R(M). (See the VT240 Programmer Reference Manual,
	Appendix B.)
Values:	Does not send the macrograph report.
□ Macrograph Report (default)	Sends the macrograph report.

Table 4-11 Graphics Set-Up Screen (Cont)

Field	Function
Graphics Print	Selects the size of the graphic
Parameter field	image printed on a graphics printer.
Values:	
☐ Compressed Print (default)	Selects an image approximately 6 \times 3 inches.
□ Expanded Print	Selects an image approximately 12 X 8 inches.
□ Rotated Print	Selects an image approximately 8 \times 12 inches that is rotated 90 degrees.
Graphics Mono/Color Print	Selects whether printed graphics are
Parameter field	black and white or color.
Values:	
□ Mono Print (default)	Selects black and white printing.
□ Color Print	Selects color printing. Use only with printers designed for color printing.
Graphics HLS/RGB Print	Selects the color designation
Parameter field	coordinate system used to send a color image.
Values:	
□ HLS Print (default)	<pre>Selects HLS (hue/lightness/ saturation).</pre>
□ RGB Print	Selects RGB (red/green/blue).
Graphics Print Background	Selects whether or not to print
Parameter field	background colors.
Values:	
□ No Print Background (default)	Sends all colors <u>except</u> background colors.
□ Print Background	Sends all colors, <u>including</u> background colors.

4010/4014 SET-UP SCREEN

The 4010/4014 Set-Up screen (Figure 4-11) lets you define Tektronix 4010/4014 graphics characteristics.

Table 4-12 describes all fields on this screen.

NOTE

To set Tektronix 4014/4014 characteristics, see the application software documentation.

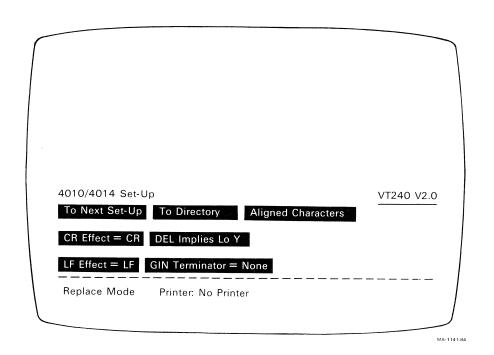

Figure 4-11 4010/4014 Set-Up

Field	Function
To Next Set-Up	Replaces the 4010/4014 Set-Up scre
Action field	with the Display Set-Up screen or the Telephone Set-Up screen (if the

Action field	with the Set-Up Directory screen.
Value: To Directory	
4010/4014 Character Mode	Selects whether to use enlarged
Parameter field	characters or smaller aligned characters. These character sizes are specific to 4010/4014 mode.
Values: □ Enlarged Characters	Displays up to 128 characters per line on a screen of up to 48 lines. Enlarged characters are easier to read than the smaller aligned characters.
☐ Aligned Characters (default)	Displays up to 133 characters per line on a screen of up to 64 lines. Aligned characters provide correct alignment for software designed for 4010/4014 graphics.
NOTE	
The remaining pa	rameter field values 4 strap options.
CR Effect	Selects whether a received carriage
Parameter field	return generates a carriage return only or a carriage return and a line feed.
Values: CR Effect = CR (default)	Selects a carriage return (CR) only.
☐ CR Effect = CR-LF	Selects a carriage return (CR) and line feed (LF).

Table 4-12 4010/4014 Set-Up Screen (Cont)

	, ,
Field	Function
DEL Implies Lo Y	Selects whether to emulate or
Parameter field	disable the 4010/4014 DEL Implies Lo Y strap option.
Values: ☐ DEL Implies Lo Y (default)	Emulates this strap option.
\square DEL ignored	Disables this strap option.
LF Effect	Selects whether a received line feed generates a line feed only or a line
Parameter field	feed and a carriage return.
Values: LF Effect = LF (default)	Selects a line feed (LF) only.
☐ LF Effect = LF-CR	Selects a line feed (LF) and carriage return (CR).
GIN Terminator =	Selects the characters that follow
Parameter field	graphics input mode (GIN) address transmission.
Values:	
\square GIN Terminator = CR	Selects a carriage return (CR).
☐ GIN Terminator = CR-EOT	Selects a carriage return (CR) and end of transmission (EOT).
☐ GIN Terminator = None (default)	Selects no character.

TELEPHONE SET-UP SCREEN

The Telephone Set-Up screen (Figure 4-12) lets you store and display telephone numbers for automatic dialing.

Table 4-13 describes all fields on this screen.

NOTE

You can only select the Telephone Set-Up screen if the VT24X-AA integral modem option is installed.

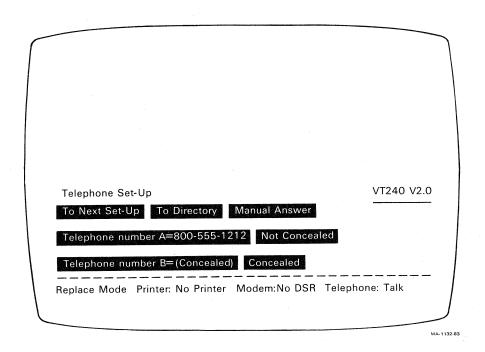

Figure 4-12 Telephone Set-Up

Field	Function		
Concealed Parameter field	Selects whether or not telephone number A is displayed on the screen.		
Tatameter freid			
Values: ☐ Concealed	The terminal displays the word "concealed" in place of the telephone number.		
□ Not Concealed (default)	The terminal displays the telephone number as it is entered.		
	NOTE If you set this field to "Concealed," you cannot reset the field to "Not Concealed" except by entering a new telephone number.		
Telephone number B =	Lets you enter a telephone number and store it as "B."		
Text parameter field			
Value: text entry	You use this field the same way as described for the "Telephone Number A =" field above.		
Concealed Parameter field	Selects whether or not telephone number B is displayed on the screen.		
Values: ☐ Concealed	The terminal displays to the word "concealed". in place of the telephone number.		
□ Not Concealed (default)	The terminal displays the telephone number as it is entered.		
	NOTE If you set this field to "Concealed," you cannot reset the field to "Not Concealed" except by entering a new telephone number.		

GENERAL

This chapter describes how the VT240 communicates with a host computer and a printer.

The terminal operates on full-duplex asynchronous lines only, and has 10 possible transmit/receive speeds. You select the transmit/receive speeds in set-up for both the terminal (Communications Set-Up screen) and the printer (Printer Set-Up screen).

The VT240 operates in accordance with the following national and international communications standards.

EIA Standard RS232C/RS423 CCITT V.24 CCITT V.26 (V.10) CCITT X.20 (V.21)

You can connect the terminal directly to a local host computer via cable. You can also connect the terminal indirectly to a remote host computer through public-switched or dedicated telephone lines, using a modem or acoustic coupler.

HOST AND PRINTER PORT INTERFACES

The $VT24\emptyset$ has two asynchronous serial ports. One is for communication with a host computer, and the other is for communication with a printer.

The host port has two connectors (COMM and 20 mA).

- A 25-pin subminiature D-type (EIA RS232C/RS423) connector used to connect the terminal to a local or remote host computer.
- An 8-pin EIA Mate-N-Lok (20 mA) connector used to connect the terminal to a local host computer.

The printer port has one connector (PR).

 A 9-pin subminiature D-type (EIA RS232C/RS423) connector used to connect the terminal to a local printer. Tables 5-1 through 5-3 describe the interface signals for the three connectors.

NOTE Connector pins not listed in Tables 5-1 through 5-3 are not used.

Table 5-1 Comm Port EIA Interface Signals

Pin	Signal	Mnemonic	EIA/CCITT/DIN	Description
2	Transmit data	TXD	BA/103/D1	From VT240: Transmits serial characters. Held in mark state when no characters are transmitted.
				In modem control modes, transmits data only when RTS, CTS, DSR, and DTR are on.
3	Receive data	RXD	BB/104/D2	To VT240: Receives serial characters. In modem control modes, ignores characters if RLSD is off.
4	Request to send	RTS	CA/105/S2	From VT240: When on, places the modem in transmit mode.
5	Clear to send	CTS	CB/106/M2	To VT240: When on, tells the terminal that the modem is ready to transmit.
6	Data set ready	DSR	CC/107/M1	To VT240: When on, tells the terminal that the modem is in the data mode and is ready to exchange RTS, CTS, and RLSD.

Table 5-1 Comm Port EIA Interface Signals (Cont)

Pin	Signal	Mnemonic	EIA/CCITT/DIN	Description
7	Signal ground	SGND	AB/102/E2	Serves as common ground reference potential for all connector signals except protective ground.
8	Receive line signal detect (carrier detect)	RLSD	CF/109/M5	To VT240: When on, tells the terminal that the signal received on the communication line is good enough to ensure correct demodulation of received data.
				When off, indicates no signal received, or signal unsuitable for demodulation.
12	Speed indicator	SPDI	CI/112/M4	To VT240: When on, enables modem to control terminal transmit and receive speeds. Sets terminal trans- mit and receive speeds to 1200 bits per second regard- less of set-up selection.
20	Data terminal ready	DTR	CD/108.2/S1.2	From VT240: When on, tells the modem that the terminal is ready to transmit or receive.
23	Speed select	SPDS	CH/111/S4	From VT240: When on, tells the modem that receive speed selected in set-up is greater than 600 bits per second.

Table 5-2 20 mA Port Interface Signals

2	Transmit -
3	Receive -
5	Transmit +
7	Receive +
8	Ground

Table 5-3 Printer Port EIA Interface Signals

Pin	Signal	Mnemonic	EIA/CCITT/DIN	Description
2	Transmit data	TXD	BA/103/D1	From VT240: Transmits serial characters. Held ir mark state when no characters are transmitted.
3	Receive data	RXD	BB/104/D2	To VT240: Receives serial characters.
5	Data terminal ready	DTR	CD/108.2/ S1.2	From VT240: On when the terminal is on.
6	Data set ready	DSR	CC/107/M1	To VT240: Receives DTR on this line. If DSR is present at power-up, the printer controls print operations. If DSR is not present at power-up, the terminal checks for DSR before each character print operation.

Table 5-3 Printer Port EIA Interface Signals (Cont)

Pin	Signal	Mnemonic	EIA/CCITT/DIN	Description
7	Signal ground	SGND	AB/102/E2	Common ground reference for all voltages on interface.
8	Signal ground	GND		Tied to pin 7.

MODEMS

The VT240 can operate with all modems conforming to the national and international standards listed at the beginning of this chapter. However, the modem at the terminal must be compatible with the modem at the host computer.

The VT240 accepts compatible modems and acoustic couplers such as the Bell 103, 113, and 212 types, in addition to Digital's DF02 and DF03.

The terminal must be certified for connection to non-Bell type modems used outside of continental North America. Your local Digital Field Service Office has detailed information on terminal certification and use of non-Bell type modems.

CABLES

Figure 5-1 shows the RS232C cables you can use to connect the terminal to a host computer and printer.

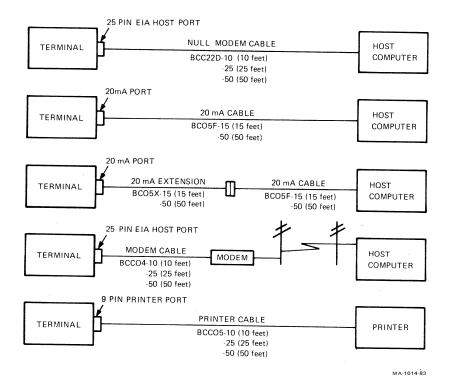

Figure 5-1 Cables

PRINTERS

You can connect the terminal to a local asynchronous serial printer using a null modem cable. Here are some of the Digital printers you can use with the VT240.

LA12	LA5Ø
LA34	LA100
LA35	LA120
LA36	LQPØ2
LA38	

CHARACTER FORMAT

The terminal sends and receives characters in serial format. You select the character format (Figure 5-2) in set-up.

NOTE Detailed information on character format is available in ANSI Standard X3.15.

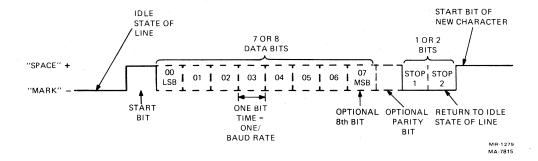

Figure 5-2 Character Format

TERMINAL -- HOST DATA FLOW CONTROL

The terminal stores incoming characters in a character input buffer and processes the characters on a first-in/first-out basis. The size of the input buffer is 2048 characters. When the input buffer fills to 64, 256, 512, or 1024 characters (selected from the Communications Set-Up screen), the terminal sends an XOFF character (if you enabled XOFF from the Communications Set-Up screen) to stop the host computer from sending more characters. If the computer fails to respond to the XOFF character, the terminal sends a second XOFF character when the input buffer fills to 1920 characters. The terminal sends a third XOFF character when the buffer is full.

When the input buffer contents falls below 16, 80, 160, or 240 characters (corresponding to the XOFF point of 64, 256, 512, or 1024 respectively), the terminal sends an XON character to signal the host computer to start sending characters again.

NOTE

If you disable XOFF in set-up, the terminal does not send XOFF to the host computer when the input buffer fills. The Hold Screen key is also disabled. With XOFF disabled, there is no way to ensure that data will not be lost.

If you enable XON/XOFF, the terminal recognizes received XON and XOFF characters. When the terminal receives XOFF, it stops sending data (except XON/XOFF characters). If the keyboard data buffer overflows, the keyboard locks and the Wait indicator turns on. The terminal starts transmitting again when it receives XON.

Conditions That Send XON

When you enable the XOFF/XON feature in set-up, the following conditions send XON.

- The number of characters in the input buffer reaches the XON point, and the last flow control character sent was XOFF.
- A clear terminal operation is performed.
- A recall operation is performed.
- The power-up self-test is completed (Chapter 6).
- The Hold Screen key is pressed to release the screen when the input buffer is at or below the XON point.

Conditions That Send XOFF

When you enable the XOFF/XON feature in set-up, the following conditions send XOFF.

- The number of characters in the input buffer reaches the first XOFF point (64, 256, 512, or 1024 characters, selected in set-up) for the first time since the last XON was sent.
- The number of characters in the input buffer reaches the second XOFF point (1920 characters) for the first time since the last XON was sent.
- The terminal receives a character when the input buffer is full (2048 characters).

Buffer Overflow Prevention

If the host computer does not respond to the XOFF from the terminal, the input buffer continues to fill with characters. If the buffer is filled and characters are still coming, the buffer overflows and characters are lost. In place of lost characters, the terminal displays reverse question mark characters (?).

You can use the following formulas to determine how fast the host computer must respond to the first XOFF character, to prevent loss of characters due to buffer overflow. Calculate the overflow first, then host response time.

NOTE

These formulas assume that you set the transmit rate limit feature in the Communications Set-Up screen to "Unlimited."

1. Overflow

OVFL = (MXBF - XOFF) - [3 X (RCDR/XMDR)]

where:

OVFL = the number of characters to overflow

MXBF = the receive buffer size (2048 characters)

XOFF = the first XOFF point (64, 256, 512 or 1024)

RCDR = the received data rate (receive speed)

XMDR = the transmitted data rate (transmit speed)

2. Host Response Time

HRST = OVFL X [(DATA + STOP + PRTY + 1)/RCDR]

where:

HRST = the host computer response time (in seconds)

OVFL = the number of characters to overflow

DATA = the number of data bits per character

STOP = the number of stop bits per character

PRTY = the number of parity bits per character

Example -- The VT240 sends and receives 8-bit characters with no parity at 4800 bits per second. There is 1 stop bit. XOFF is sent when the buffer has 1024 characters in it.

OVFL = $(2048 - 1024) - [3 \times (4800/4800)]$ = 1021 characters

HRST = $1021 \times [(8 \text{ bits} + 1 \text{ bit} + 0 \text{ bits} + 1)/4800]$ = 2.13 seconds

Therefore, the host computer must stop sending data in 2.13 seconds, or the terminal input buffer will overflow.

Use of Fill Characters

Software that does not support XON/XOFF characters from the terminal can still use all the terminal features by using fill characters. In some applications, you can use the terminal without XON/XOFF support or the use of fill characters. However, the bit rate must be limited to 4800; also the software must not send the ESC (escape) code, or use slow scrolling, split screen, or the printer port.

Connect/Disconnect

When a connection is made to the host computer via a modem, the terminal performs the following operations to ensure it is ready to send and receive.

- Unlocks the keyboard (if it was locked).
- Clears any transmit in progress.
- Clears the keyboard buffer and all message buffers.
- Clears the input buffer.
- Clears XOFF sent and XOFF received.

The following conditions cause communications line disconnect.

- Typing Shift-Break
- Invoking "Recall" or "Default" values in the Set-Up Directory screen
- Loss of DSR
- Loss of RLSD for a time you defined in set-up
- No RLSD within 30 seconds after DSR
- A self-test command received from the host computer
- Switching among the EIA port, the 20 mA port, and the integral modem port

The usual way to disconnect the terminal from the communications line at the end of communications is to type Shift-Break. The host computer's response to the disconnect signal depends on the computer and the software.

PRINTER PORT OPERATION

You can use the printer port as an input, output, or input/output device (selected in set-up).

When you select the printer port as an input device (printer-to-host mode), you can send data from the printer (or auxiliary device) and the keyboard to the host (Figure 5-3). The terminal treats data from the printer port the same as keyboard data. Usually, this data is sent to the host computer.

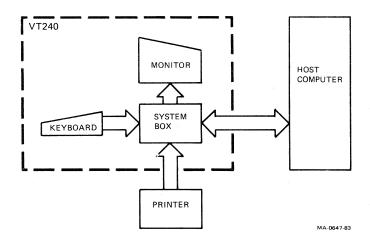

Figure 5-3 Printer Port as Input Device (Printer-to-Host Mode)

When you select the printer port as an output only device (no printer-to-host), you can start text and graphics print functions from the keyboard as well as from the host computer. However, input from the printer is disabled (Figure 5-4).

When you select the printer port as an input/output device (printer controller mode), the device connected to the printer port is treated as a terminal, while the VT240 monitors line traffic (Figure 5-5). All characters from the host are sent directly to the device connected to the printer port, except XON, XOFF, NULL, and control functions from the host that turn printer controller mode on and off. All characters from the printer are sent directly to the host, except XON, XOFF, and NULL.

NOTE

Make sure the host line is compatible with the printer port line.

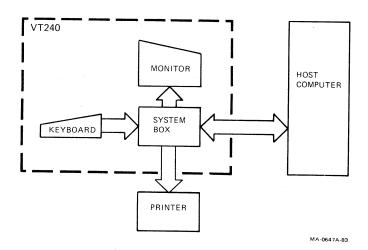

Figure 5-4 Printer Port as Output Device (Normal Print Mode)

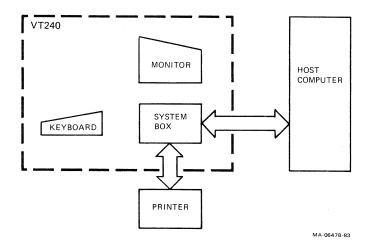

Figure 5-5 Printer Port as Input/Output Device (Printer Controller Mode)

TERMINAL -- PRINTER DATA FLOW

The XON/XOFF protocol controls data flow between the terminal and the device connected to the printer port. You can enable or disable XON/XOFF support in set-up. When XOFF is enabled, and the device sends XOFF, the terminal stops sending data through the printer port. The terminal starts sending data again when it receives XON or a clear comm operation is performed.

The terminal has a 256-character input buffer for the printer port, with XOFF points of 128, 184, and 256 characters. The XON point is 16 characters.

When XOFF is enabled, the printer receive buffer fills to the first or second XOFF point. A third XOFF is sent when the buffer reaches the third XOFF point. An XON is sent when the buffer empties to the XON point.

GENERAL

This chapter describes what to do if there is a problem with the VT240. It provides a problem checklist, and describes the power-up self-test.

COMMON OPERATING PROBLEMS

Table 6-1 lists common operating problems and their possible solutions. Check this list before calling for service.

Table 6-1 Common Operating Problems

Problem	Possible Solution
The terminal does not power up when the power switch is set to 1 (on).	Make sure the terminal power cord is plugged into the wall outlet. Check for power at the wall outlet by plugging in a lamp to see if it lights.
	Make sure the voltage selection switch is in the correct position. (See the VT240 Installation Guide for the correct setting.)
	Check the fuse and replace if necessary. (If the fuse blows again, there is a possible shorting problem. Contact Digital Field Service.)

Table 6-1 Common Operating Problems (Cont)

Problem	Possible Solution
The printer does not print.	Make sure the printer is plugged in and its power switch is in the on position.
	Make sure the cable connection between the printer and terminal is tight.
	Make sure all communication features on the terminal and printer (such as baud rate and parity) match.
The monitor display does not resume scrolling. The Hold Screen indicator is on.	Press the Hold Screen key to resume scrolling.
The terminal seems to be locked and does not respond to data sent from the host.	Clear the terminal by using the "Clear Comm" field in the Set-Up Directory screen (Chapter 4).
The screen is blank. Power OK indicator is on.	The CRT saver feature (Chapter 1) may be invoked. Press any key to reactivate the screen display.
	Make sure the brightness and contrast controls are properly adjusted.
The bell tone does not sound when the terminal is turned on. Keyboard visual indicators are not on.	Make sure the keyboard is connected to the terminal.

POWER-UP SELF-TEST

power-up self-test runs automatically each time you power up the terminal. During the test cycle, the power-up self-test has full control of the the terminal. The terminal cannot respond to commands other than those used for the test itself. When the test cycle ends, control returns to the terminal.

In the self-test mode, the monitor screen and the keyboard Screen, Lock, Compose, and Wait) provide indicators (Hold information about the terminal operating status. The monitor screen displays a text message, and the keyboard indicators provide a coded message.

PERFORMING THE POWER-UP SELF-TEST

Start the power-up self-test by setting the terminal power switch to 1 (on) (Figure 6-1).

During the self-test the following events should occur.

- All keyboard indicators turn on and off.
- The bell tone sounds.

A successful power-up self-test ends with all keyboard indicators off, the power ok indicator on, and the screen displaying the message shown in Figure 6-1. The message is erased when a character is received from the host computer, or when you press any key.

The terminal displays an error message on the screen (if possible) if the test finds an error. Table 6-2 explains the error messages displayed on the screen.

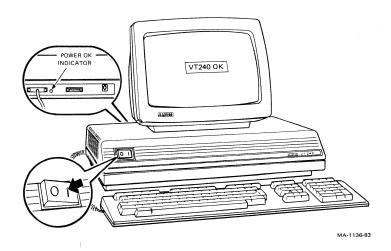

Figure 6-1 Power-Up Self-Test Indicators

Table 6-2 Screen Error Messages

Screen Error Message	Problem
VT240 Display Processor Error - 1	Terminal controller board. This may be a fatal error, meaning the terminal cannot operate.
VT240 Printer Port Error - 2	Printer port. Terminal can operate, but cannot perform printing functions.
VT240 EIA Port Data Error - 4	Terminal controller board. The EIA host port cannot operate.
VT240 Keyboard Error - 6	Keyboard. Terminal can only to receive input from the host computer.
VT240 Keyboard Port Error - 7	Terminal controller board. The keyboard cannot send or receive data from the terminal.
VT240 Modem Error - 8	Modem. Terminal can operate, but cannot send or receive data via the modem.
VT240 Monitor Error - 9	Monitor or monitor cable. Terminal cannot display data.
VT240 NVR Error - 10	Terminal controller board. The nonvolatile memory (set-up storage) is not available.
VT240 Display Memory Error - 11	Terminal controller board. The monitor may display nothing or scrambled data.
VT240 Video Error - 12	Terminal controller board. The monitor may display nothing or scrambled data.

DIGITAL SERVICE

If the self-test indicates a problem, call your local Digital Field Service number for assistance. Before calling, make sure to note the exact nature of the problem, when it occurred, and any error messages or codes that appeared.

Information about your warranty, Digital services, terminal supplies, and spare parts is provided on the inside of the back cover of this manual.

APPENDIX A SPECIFICATIONS

GENERAL

This appendix lists the specifications of the VT240/VT241 video terminals.

Physical

System box

Height	10.2 cm (4 in)
Width	45.7 cm (18 in)
Depth	30.5 cm (12 in)
Weight	7.2 kg (16 lbs)

Keyboard

Height	5.1 cm (2.0 in)
Width	53.3 cm (21.0 in)
Depth	17.1 cm (6.75 in)
Weight	2.0 kg (4.5 lbs)

Monochrome monitor

Height	29.2 cm (11.5 in)
Width	34.9 cm (13.75 in)
Depth	31.1 cm (12.25 in)
Weight	6.4 kg (14 lbs)
Adiustable tilt	+5 to -25 degrees

Color monitor

Height	32.4 cm	(12.75 in)
Width	38.0 cm	(15 in)
Depth	42.1 cm	(17.0 in)
Weight	16.6 kg	(36.6 lbs)

Keyboard Characteristics

General

105-key detachable unit with a 1.9 m (6.0 ft) coiled cord with a 4-pin telephone-type modular connector. Word processing and data processing versions available in 15 languages.

Keypad

Sculptured key array. Matte texture finish keys. Home-row key height 30 mm (1.18 in) above desktop.

Key size

 $1.27 \text{ cm} (\emptyset.5 \text{ in}) \text{ square}$

Key spacing

1.9 cm (0.75 in) center-to-center (single-width keys)

Numeric keypad

18 keys

Function keys

36 keys, firmware and software driven

Visual indicators

4 LED indicators: Hold, Lock, Wait, and Compose

Audible signals

Keyclick sound after each keystroke.

Bell sounds when (1) BEL character received, (2) approaching right margin, and (3) compose errors occur.

Multiple bell sounds when error occurs in set-up save or recall operation.

APPENDIX B OPTIONS, DOCUMENTATION, AND SUPPLIES

GENERAL

This appendix describes options, documentation, and supplies offered by Digital for the VT240. Part numbers and ordering information are included.

AVAILABLE OPTIONS

There are two options available for the VT240. These options are described below and can be ordered from Digital.

Part Number	Description
-------------	-------------

VT24X-AA

Integral modem/auto dialer - This option is a circuit board installed in the VT240 system box. The option allows you to dial through to a host computer from the keyboard, eliminating the need for a telephone as a dialing

mechanism.

VR24X-AA

Tilt swivel option for the color monitor

RELATED DOCUMENTATION

In addition to this owner's manual, you can order the following $VT24\emptyset$ documents from Digital.

Tit]	lе	and	Part	Num:	ber
------	----	-----	------	------	-----

Description

VT240 Pocket Service Guide (EK-VT240-PS)

Describes the procedures used to troubleshoot and repair the VT240 to the field replaceable unit.

VT240 Technical Manual (EK-VT240-TM)

Describes the VT240 to a detailed functional block level. Provides troubleshooting information. Does not include detailed

schematics.

Title and Part Number

VT240 Video Terminal IPB (EK-VT240-IP)

Description

Provides a detailed parts breakdown of the VT240 field replaceable units. Does not provide part numbers for printed circuit board components.

VT240 Family Field Maintenance Print Set (MP-01807-01) Provides a complete set of VT240 electrical and mechanical schematic diagrams.

SPECIFICATIONS

ANSI specifications are available from:

Sales Department American National Standards Institute 1430 Broadway New York, NY 10018

EIA specifications are available from:

Engineering Department Electronic Industries Association 2001 Eye Street, NW Washington, DC 20006

International standards are available from:

CCITT
UN Book Store
United Nations Building
New York, NY 10017

ORDERING INFORMATION

You can order options, supplies, and documentation by phone from 8:30 a.m. to 6:00 p.m. (EST) or by mail.

Continental USA and Puerto Rico

Call 800-258-1710 or mail to:

Digital Equipment Corporation P.O. Box CS2008 Nashua, NH 03061

New Hampshire, Alaska, Hawaii

Call 1-603-884-6660.

Outside the USA and Puerto Rico

Mail to:

Digital Equipment Corporation Attn: Accessories and Supplies Business Manager c/o Local Subsidiary or Digital-Approved Distributor

GENERAL

This appendix provides illustrations of all national keyboards for the VT240 in the following order.

NOTE
Most of the keyboards are available in
two versions, standard and word
processing. Although the key positions
on both types of keyboards are the same,
the word processing version has
different key legends, appropriate to
word processing only.
